New human herpes virus gene region containing 8 open reading frames -useful for, e.g. diagnosing Kaposi's sarcoma or body cavity based large cell lymphoma.

Claim 1, Page 59-60; 84pp; English.

The sequence represents a novel human herpesvirus 8 (HHV-8) interleukin-6. The invention claims for novel genes, which includes the viral interleukin-6 gene, found at the divergent DL-B locus. HHV-8 divergent locus DL-B lies between open reading frames 11 and 17. Sequencing of the HHV-8 divergent locus DL-B revealed the presence of nine viral ORFs with gene products related to cellular proteins. These proteins include the thymidylate synthase (TS, AAM40100), dihydrofolate reductase (DHFR, see AAM40101), Bcl-2 homologue (AAM40102), IE-1A (AAM40107), IE-1B (AAM40108) macrophage inhibitory protein (MMIP)-1A (AAM40104) and -1B (AAM40105) and beta-chemokine-like (BCK, AAM40106) protein. The invention claims the

infections and diseases as mentioned above

Sequence 204 AA;

SXS

```
mentioned proteins and a polynucleotide containing HHV-8 genes encoding one or more of these proteins. The invention also claims that the polynucleotide and the proteins may be used directly or indirectly, e.g. using antibodies to the proteins, to diagnose an HHV-8 associated disease, e.g. Kaposi's sarcoma, Castleman's disease, multiple myeloma and body cavity based large cell lymphoma (BCBL). The proteins have also been claimed to be useful in screening compounds for drugs to treat HHV-8 diseases. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                              180

```

The interleukin-6 (IL-6) and protein AAW21945 derived from the sequence can be used to detect antibodies and antibodies can be used to detect IL-6. This can be used for the diagnosis of HRV8 infection or associated diseases such as Kaposi sarcoma or kidney cell carcinoma. Antibodies, proteins and the gene sequence can all be used in the treatment of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Newly isolated or recombinant polynucleotide encoding mammalian cytokine interleukin-B30 (IL-B30), including fragments - useful for regulating activation, development, differentiation and function of various cell types, and for diagnosing and treating conditions associated with IL-B30.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to mammalian cytokine interleukin-B30 (IL-B30) polypeptides. Host cells containing a vector comprising the IL-B30 nucleic acids are used for the recombinant production of the proteins. The polynucleotides are useful for diagnosis of IL-B30 mediated conditions, and forensic science (e.g. to distinguish rodent from human, or as a marker to distinguish between different cells exhibiting differential expression or medification patterns). The IL-B30 (including fragments), together with antibodies that bind to IL-B30 are useful for teaching purposes. They are also used for treating conditions associated
arthritis, systemic lupus erythematosus, scleroderma and malignancies of kidney or head/neck. The vaccines (comprising a KHSV-specific immunogen) is used to produce a therapeutic and/or prophylactic response
                                                                                                                                                                                                                                                                                                                                                                                                                          Cytokine; interleukin-B30; IL-B30; forensic science; cell proliferation; inflammatory condition; drug screening; human; IL-6.

with abnormal physiology or development, including inflammatory conditions. The polypeptide cytokine should mediate cytokine synthesis and proliferation in cells. IL-B30 is useful for drug screening to identify compounds having binding affinity to IL-B30. The present sequence represents a Kaposis's sarcoma herpes virus IL-6. ```
AAW02610-W02612 represent human interleukin-6 (IL-6) mutants (see
AAW02609 for wild type sequence), with an increased specificity for the
specific receptor. These sequences were identified using the method of
the invention. The method comprises comparing IL-6 with the sequence of
the bovine granulocyte colony stimulating factor (bG-CSF). On the basis
of this comparison a 3-dimensional model of IL-6 is formulated, which
allows the identification of residues that form the site of interaction
with the specific receptor, and those that constitute the site of
interaction with gpl30. The method can be used to identify superagonists,
antagonists, and superantagonists of IL-6. The IL-6 superagonists
identified by this method can be used for the treatment of
thrombocytopaenia, and for the ex vivo expansion of human haematopoietic
progenitor cells for bone marrow transplantation and gene therapy. They
can also be used for the treatment of breast cancer, leukaemia, and
progenitor cells. The antagonists and superantagonists identified by the
method (see AAW03476-W08476) can be used for the treatment of cidseases
method see AAW03476-W08476) can be used for the treatment of idiseases
                                                                                                                                Identifying interleukin-6 super-agonists and (super)antagonists - using a 3-dimensional model of bovine granulocyte colony stimulating factor to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       characterised by the overproduction of IL-6, particularly multiple myeloma, rheumatoid arthritis, postmenopausal osteoporosis, and systemic lupus erythematosus. The method can also be used to identify IL-6 variants with a greater affinity for the specific receptor, or variants with a reduced or abolished affinity for gpl30. (Updated on 25-MAR-2003

```
AM02609 for wild type sequence), with an increased specificity for the specific receptor. These sequences were identified using the method of the bovine granulocyte colony simulating factor (bd-CSF). On the basis of this comparison a 3-dimensional model of IL-6 is formulated, which allows the identification of residues that form the site of interaction with the specific receptor, and those that constitute the site of interaction with appl30. The method can be used to identify superantagonists of interaction with applantagonists of interaction with a method can be used for the treatment of thrombocytopaenia, and for the expansion of human haematopoietic thrombocytopaenia, and for the treatment of bused for the treatment of bused for the treatment of breast cancer, leukemia, and infectious diseases or diseases connected with disorders of bone marrow progenitor cells for bone marrow transplantation and gene therapy. They can also be used for the treatment of bone marrow progenitor cells. The antagonists and superantagonists of bone marrow progenitor cells. The antagonists and superantagonists identified by the overproduction of IL-6, particularly multiple myeloma, rheumatoid arthritis, postmenopausal osteoporosis, and systemic lupus expthematosus. The method can also be used to identify IL-6 variants with a reduced or abolished affinity for the specific receptor, or variants with a reduced or abolished affinity for the specific receptor, or variants with a reduced or abolished affinity for the specific receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to modified cytokines that exhibit increased resistance to proteolysis compared to unmodified cytokines. The invention also relates to nucleic acid molecules encoding the cytokines, a pharmaceutical composition comprising a nucleic acid molecule in a pharmaceutical carrier, and a method of generating a protein or peptide molecule having a predetermined property or activity, or a pre-selected altered phenotype. The modified cytokine is selected from a member of the interferons (IRNs)/interleukin (IL)-10 protein family, a member of the family or a member of the short-chain cytokine family or a member of the short-chain cytokine family and method are useful for diagnosing and treating diseases such as infections, allergies, heart diseases, cancer, liver diseases such as utoimmune diseases, growth disorders, diabetes or neurodegenerative diseases. This sequence represents a human modified cytokine protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New modified cytokines with increased resistance to proteolysis, useful for diagnosing and treating diseases such as infections, allergies, heart diseases, cancer, liver disorders, autoimmune diseases or diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FNETSCLKKLADGFFEFEVLFKFLTTEFGKSVINVDVMELLTKTLGWDIQEELNKLTKTH 147

Identifying interleukin-6 super-agonists and (super)antagonists - using a 3-dimensional model of bovine granulocyte colony stimulating factor to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW08476-W08478 represent human interleukin-6 (IL-6) mutants (see AAW02609 for wild type sequence), with greater affinity for the receptor, which can be used as IL-6 antagonists and superantagonists. These sequences were identified using the method of the invention. The method comprises comparing IL-6 with the bovine granulocyte colony stimulating factor (bG-CSF) sequence. On the basis of this comparison a 3-dimensional

model of IL-6 is formulated, which allows the identification of residues
that form the site of interaction with the specific receptor, and those
that constitute the site of interaction with applion The method can be
used to identify superagonists, antagonists, and superantagonists of IL-
treatment of thrombocytopaenia, and for the ex vivo expansion of human
hematopoletic progenitor cells for bone marrow transplantation and gene
therapy. They can also be used for the treatment of breast cancer,
cleukaemia, and infectious diseases or diseases connected with disorders
of bone marrow progenitor cells. The antagonists and superantagonists
of bone marrow progenitor cells. The antagonists and superantagonists
cleukaemia, and infectious diseases or diseases connected with disorders
of bone marrow progenitor cells. The antagonists and superantagonists
cleukaemia rheumatoid arthritis, postmenopausal osteoporosis, and systemic
lupus erythematosus. The method can also be used to identify IL-6
variants with a greater affinity for the specific receptor (see AAW02610-
W02612), or variants with a reduced or abolished affinity for gpl30.

The present sequence is the protein sequence of a novel fusion protein comprising a soluble form of the human interleukin-6 receptor, denoted DS -81L-6K (see also ABP72709), joined via a peptide linker to a human IL-6 molecule (see also ABP72709), with a C-terminal c-myc tag sequence. Administration of this fusion protein results in the increased expression of one or more of MIP-lalpha, MIP-lbeta and RAWYES complete with HIV for binding to CCR5 and effectively suppress HIV entry. The fusion protein can be used in the treatment of any disease in which the infectious agent binds to CCR5, especially M-trophic strains of HIV. The invention also provides a nucleic acid molecule encoding the fusion protein, an expression vector, a host cell, and a method of producing the fusion protein in the host cell. The fusion protein, nucleic acid or vector can be used in the manufacture of a medicament for the prophylaxis or treatment of an infectious disease (especially AIDS caused by a M-trophic strain of HIV, or bacterial peritonitis), an inflammatory disorder or an immunological disorder (especially rheumatoid arthitis), when it is desirable to increase or resolve an immune response (claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         428

AW02609 for wild type sequence), with greater affinity for the receptor, which can be used as IL-6 antagonists and superantagonists. These sequences were identified using the method of the invention. The method comprises comparing IL-6 with the bovine granulocyte colony stimulating factor (bG-CSF) sequence. On the basis of this comparison a 3-dimensional model of IL-6 is formulated, which allows the identification of residues that form the site of interaction with the specific receptor, and those that constitute the site of interaction with gpl30. The method can be used to identify superagonists, antagonists, and superantagonists of IL-6 of Thrombocytopaenia, and for the ex vivo expansion of human hemmatopoietic progenitor cells for bone marrow transplantation and gene therapy. They can also be used for the treatment of breast cancer. Clenkaemia, and infectious diseases onnected with disorders of bone marrow progenitor cells for bone marrow transplantation and gene therapy. They can also be used for the treatment of breast cancer. Clenkaemia, and infectious diseases onnected with disorders of bone marrow progenitor cells. The antagonists and superantagonists clenkaemia cancer the method can be used for the treatment of diseases.

Characterised by the method can be used for the treatment of diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           lupus erythematosus. The method can also be used to identify IL-6 variants with a greater affinity for the specific receptor (see AAW02610-W02612), or variants with a reduced or abolished affinity for gpl30. resistance to proteolysis compared to unmodified cytokines. The invention also relates to nucleic acid molecules encoding the cytokines, a pharmaceutical composition comprising a nucleic acid molecule in a pharmaceutical carrier, and a method of generating a protein or peptide molecule having a predetermined property or activity, or a pre-selected altered phenotype. The modified cytokine is selected from a member of the long-chain cytokine family in a member of the family. The composition and method are useful for diagnosing and treating diseases such as infections, allergies, heart diseases, cancer, liver disorders, autoimmune diseases, growth disorders, diabetes or neurodegenerative diseases. This sequence represents a human modified cytokine protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New modified cytokines with increased resistance to proteolysis, useful for diagnosing and treating diseases such as infections, allergies, heart diseases, cancer, liver disorders, autoimmune diseases or diabetes.

The invention relates to a polynucleotide comprising a first nucleotide sequence (NS1) comprising a LL6 (interleukin-6, an inflammatory cytokine) isogene selected from isogenes 1-11 and 13-18 given in the specification, where each isogene comprises the regions of NS1 and is further defined by the corresponding sequence of polymorphisms whose locations and identities are defined in the specification (PS2-PS6, PS8 and PS10-PS17), or a second nucleotide sequence (NS2) complementary to NS1.

Alternatively, the sequence comprises a coding sequence for an LL6 isogene. Also included are methods of haplotyping/ genotyping (and isogene. Also included are methods of haplotyping/ genotyping (and isogene) of the LL6 gene of an individual, identifying an association between a trait and at least one haplotype or haplotype pair of the LL6 gene, an isolated oligonucleotide for detecting a polymorphism in the LL6 gene, a recombinant non-human organism (III) transformed or transfected with the LL6 polymucleotide, an isolated fragment of the LL6 isogene comprising at least 10 and containing one of the indexified single- nucleotide polymorphism (SNP), an isolated the LL6 isogene comprising at least 10 and containing the latest and the Least one had the latest and the l
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polypeptide (or fragment) comprising an amino acid sequence which is a polymorphic variant of IL6, an isolated monoclonal antibody specific for IL6, a computer system for storing and analysing polymorphism data for the IL6 gene, and a genome anthology for the IL6 gene. The IL6 polymorphic variant is useful in screening for drugs targeting IL6 that are useful for treating myeloma, coronary artery disease (CAD),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Genetic variants of interleukin-6 isogenes for improving efficiency and reliability in drug development for treating myeloma, coronary artery disease, arthritis and Kaposi sarcoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; interleukin-6; IL6; myeloma; arthritis; CAD; Kaposi sarcoma; coronary artery disease; inflammatory cytokine; hypercalcaemia; bone disease; inflammatory disease; HIV; human immunodeliciency virus infection; stunted growth; isogene; systemic onset juvenile chronic arthritis; haplotype; genotype; chromosome 7p21-p15; gene therapy; SNP; single nucleotide polymorphism.

arthritis, Kaposi sarcoma (associated with human immunodeficiency virus infection, HIV), hypercalcaemia, bone disease, inflammatory disease, stunted growth and systemic onset, juvanile chronic arthritis. The methods are useful for improving the efficiency and reliability in the discovery and development of drugs and in the validation of IL6 as a drug target. The antibody is useful in diagnostic, prognostic and therapeutic methods and in expressing IL6 protein for use in screening for candidate drugs. The gene for IL6 is located on chromosome 7p21-p15. The present sequence is a interleukin-6 protein variant. Note: The present sequence is not shown in the specification but was created by the indexer using the IL6 sequence appearing as AAU99244 and the information on page 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | ::: || | ::: | | ::: | | ::: | | ::! | | ::! | | ::! | | ::! | | ::: | | ::: | | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | :: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::: | ::
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 58 GICKGILEPAAIFHLKLPAINDIDHCGLIGFNETSCLKKLADGFFEFEVLFKFLTTEFGK 117

The present sequence is a interleukin-6 protein variant. Note: The present sequence is not shown in the specification but was created by the indexer using the IL6 sequence appearing as AAU99244 and the information on page 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         75

Genetic variants of interleukin-6 isogenes for improving efficiency and reliability in drug development for treating myeloma, coronary artery disease, arthritis and Kaposi sarcoma.

Claim 29; Page; 86pp; English.

The invention relates to a polynucleotide comprising a first nucleotide sequence (NS1) comprising a Li6 (interleukin-6, an inflammatory cytokine) isogene selected from isogenes 1-11 and 13-18 given in the specification, where each isogene comprises the regions of NS1 and is further defined by the corresponding sequence of polymorphisms whose locations and identities are defined in the specification (PS2-PS6, PS8 and PS10-PS17), as a second nucleotide sequence (NS2) complementary to NS1.

Alternatively, the sequence comprises a coding sequence for an IL6 isogene. Also included are methods of haplotyping/ genotyping (and isogene. Also included are methods of the IL6 gene of an individual, identifying an association between a trait and at least one haplotype or haplotype pair of the IL6 gene, a recombinant non-human organism (III) transformed or transfected with the IL6 polymucleotide, an isolated fragment of the IL6 isogene comprising at least 10 and containing one of the indentified single-nucleotide polymorphisms (SNP), an isolated the indentified single-nucleotide polymorphisms (SNP), an isolated polypeptide (or fragment) comprising an amino acid sequence which is a polypeptide (or fragment) comprising an amino acid sequence which is a polymorphic variant of IL6, an isolated monoclonal antibody specific for IL6, a computer system for storing and analysing polymorphism data for the IL6 gene, and a genome anthology for the IL6 gene. The IL6 care useful for treating myeloma, coronary artery disease (CAD), arthritis, Kaposi sarcoma (associated with human immunodeficiency virus infection, HIV), hypercalcaemia, bone disease, inflammatory disease, arthritis, The methods currentled growth and systemic onset juvenile chronic arthritis. The methods are useful for improving the efficiency and carlability in the discovery and development of drugs and in the validation of IL6 as a drug target. The antibody is useful in diagnostic, prognostic and therapeutic methods. The IL6 isogene is useful in studying the expression and function of IL6, and in expressing IL6 protein for use in screening for candidate drugs. The gene for IL6 is located on chromosome 7p21-p15. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                          Sequence 12, Application US/08945529
Patent No. 5972902
Patent No. 5972902
GENERAL INFORMATION:
APPLICANT: CILIBERTO, Gennaro
APPLICANT: SAUTHO, ROCCO
APPLICANT: ANTAGONISTS OF HUMAN INTERLEUKIN-6 THAT
TITLE OF INVENTION: ANTAGONISTS OF HUMAN INTERLEUKIN-6 THAT
TITLE OF INVENTION: THE PREPARATION OF PHARMACEUTICAL COMPOUNDS
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: BROWDY AND NEIMARK, P.L.L.C.

A; Note: the genome of A. thaliana contains a beta-tubulin gene family consisting of at 16
A; Note: the transcript of this beta-1 tubulin gene accumulates predominantly in roots
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  tubulin beta-1 chain - Arabidopsis thaliana (mouse-ear cress)
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Accession: 470275

Submitted (JAN-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential role in the final differentiation of B-cells into Ig-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, hepatocytes it induces acute phase reactants (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the IL-6 superfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                "Molecular cloning and expression of cynomolgus monkey interleukin-

J. Immunol. 155.3946 (3954 (1995).

-!- FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential role in the final differentiation of B-cells into 19-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, in hepatocytes it induces acute phase reactants.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the IL-6 superfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ---LIORLINWMLWVIDECFRDLCYRT
